(54) Title: AIR PERMEABLE CLADDING PANEL

(57) Abstract: The present invention relates to a cladding material, for a building or other construction. The cladding material comprises an outer air permeable cover (3) an inner air permeable cover (4) and an intermediate layer (2). The intermediate layer has a graduated filtering profile for allowing selective particle filtration, thereby enhancing filtration through depth and hence delay clogging.

* Special categories of cited documents:

- 'A' document defining the general state of the art which is not considered to be of particular relevance
- 'E' earlier document but published on or after the international filing date
- 'L' document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- 'O' document referring to an oral disclosure, use, exhibition or other means
- 'P' document published prior to the international filing date but later than the priority date claimed

- 'T' later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- 'X' document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- 'Y' document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- 'Z' document member of the same patent family
